Flexible Waterproof Upstand FOR SHOWER TRAYS AND BATHS

Classi Seal® is a professional, patented waterproofing solution applied by hand to the wall facing sides of shower trays or baths prior to installation. The inherent flexibility of the product can accommodate 15mm of movement, making it equally suitable for new build, repair or renovation.

Classi Seal® consists of a blue flexible upstand made from ethylene propylene diene monomer (EPDM) and a modified butyl rubber adhesive.

The EPDM is extruded with an integral anti-stretch glass fibre reinforcing strip. This aids the speed and ease of fitting, and also allows for subsequent manipulation in the corners to assist with the tiling operation.

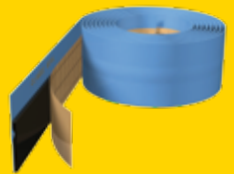

Classi Seal® prevents water leakage from around shower trays and baths caused by the inevitable shrinkage and movement within buildings.

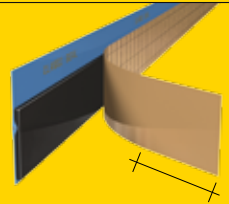

FASTER...CLEANER...EASIER...

Classi Seal® is supplied in a range of lengths to match standard shower tray and bath sizes and is used in an unbroken, continuous run. Ensure contact surface is keyed, clean and dry.

- (1) Select the correct length of Classi Seal® product.
- (2) Remove the backing paper 100mm at a time.
- (3) Align the top of the black adhesive strip with the top edge of the shower tray or bath and firmly press on by hand.
- (4) Manipulate and widen the upstand at corners.
- (5) Following tiling, finish with a purpose made sanitary sealant.

1

Remove the backing tape 100mm at a time.

2

3

Upper part of the upstand is easy to manipulate by hand to fit into irregular internal corners which are not square, so as not to interfere with the tiling.

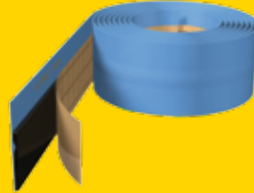

Classi Seal® is available in standard roll sizes of 2m, 2.5m, 3.2m and 4m or in other lengths to special order.
