

PREMIUM PUMP PACK

The next generation pump pack from MYSON FLOORTEC works alongside the premium manifold to control the underfloor heating system, allowing it to work at a lower flow temperature. It is compatible with all MYSON manifolds, including the leading premium manifolds and is easily installed.

The fully assembled premium pump pack has all the advantages of before, including a high efficiency circulating pump which now comes assembled with a thermostatic mixing valve complete with integral non-return valve and flow regulating valve ideal for balancing large systems.
